The background of the entire image is a wall covered in a repeating pattern of geometric glass tiles. Each tile is a complex, multi-faceted shape, resembling a stylized diamond or a cluster of smaller triangles. The tiles are primarily a light blue color with white, marble-like veining. They are set in a dark brown or black grout. In the lower-left foreground, there is a dark brown ceramic pitcher with a handle and a matching bowl. A wooden stick, possibly a chopstick, is resting in the bowl. The overall lighting is soft and even, highlighting the textures of the tiles and the ceramic.

GEOMETRIC GLASS MOSAIC

DIAMOND

Diamond goes beyond the concept of patterns to inhabit space itself. It is a completely innovative, pure line in spite of the way it references the history of cathedral glass with vein patterns, and modern architecture with the Art Deco of the Chrysler Building by William Van Alen and the pure geometry of Frank Lloyd Wright. Diamond is first and foremost characterized by grout, the central factor in the decorative module. The grout creates a pattern that moves through the sheets of glass and guides the eye over algorithmic shapes. The Diamond mosaic is produced in bright, luminous, artistic glass, thinner than sanded glass.

The unique design allows the use of grouts in tone-on-tone shades for a refined effect, or in contrasting colours for a more eccentric, trendy composition.
