MOSS

Moss reproduces the porphyry, a type of rock formed by the cooling of volcanic eruptions from ages ago, with moss marks imprinted on the material. The fusion between rock and sparse vegetation is expressed by organic forms, of darker tones, which occasionally occur on its surface.

Moss brings a soft rusticity, which characterizes porphyries that present a chromatic balance among natural tones. It's ideal for internal and external projects that seek the warmth of a natural stone with the versatility of porcelain tiles.
